ELECTRONYSTAGMOGRAPHY (7/13)

Your doctor has recommended that you have a special test of your balance system. It is called an ENG or electronystagmography. The test can be performed at the following locations. You do *not* need to have another hearing test at these locations. If it needs to be repeated, it is best to perform it on the same machine as your initial hearing test so an accurate comparison can be made. You should ensure that the results of the test are faxed to our office to interpret based on your specific medical condition.

It is important to be off all sedative medication (*Valium, Xanax, Ativan*, etc.), anti-nausea medication (*Compazine, Tigan, Phenergan*, etc.), and antihistamines (*Antivert, Benadryl*, etc.).
